CAREER OBJECTIVE

Self-driven Full-Stack Developer with hands-on experience building responsive, user-friendly web applications using React, Next.js, Node.js, and MongoDB. Passionate about clean UI, component-based architecture, modern authentication, and shipping production-ready full-stack applications. Actively seeking remote opportunities to contribute and grow within a product-focused team.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frameworks & Libraries: React.js, Next.js 16 (App Router), React Router, Context API, Express.js

Styling: Tailwind CSS, shadcn/ui, DaisyUI, Framer Motion

Authentication: Better Auth, MongoDB Adapter, Google OAuth, JWT

Database: MongoDB Atlas (Native Driver)

Tools & Libraries: React Query, Axios, Recharts, Lucide React, React Icons, Git, GitHub

PROJECTS

IdeaVault — Startup Idea Sharing Platform

Tech Stack: Next.js, Tailwind CSS, shadcn/ui, Framer Motion, Node.js, Express.js, MongoDB Atlas, BetterAuth, JWT | [GitHub](#) | [Live](#)

Engineered a full-stack startup idea sharing platform enabling innovators to publish, discover, and engage with concepts. Built with a decoupled frontend-backend architecture, JWT-secured cross-service communication, and deployed on Vercel.

- **Secure Cross-Service Authentication:** Implemented BetterAuth with Email/Password and Google OAuth, solving JWT verification across a separately deployed Express.js backend to ensure protected routes and session integrity without a monolithic setup.
- **Idea Discovery & Content Search:** Built a search system using case-insensitive MongoDB regex queries and category filtering, enabling users to quickly surface relevant startup ideas and reduce content discovery friction.
- **Community Engagement Features:** Developed a per-idea comment and bookmark system using MongoDB, allowing authenticated users to engage with and save ideas, increasing platform stickiness and enabling a personalized experience.
- **Personalized User Dashboard:** Delivered three dashboard views—My Ideas, My Interactions, and My Bookmarks—with real-time toast notifications via shadcn/ui, giving users full visibility of their activity without cluttering the main feed.

QurbaniHat — Livestock Booking Platform

Tech Stack: Next.js 16, Tailwind CSS, Better Auth, MongoDB Atlas, React Spring, Lottie, Animate.css | [GitHub](#) | [Live](#)

Developed a full-stack livestock booking platform for the Qurbani season where users browse, filter, and reserve animals through a guided auth flow. Used Next.js 16 App Router for SSR performance and BetterAuth to manage OAuth complexity across environments.

- **Livestock Discovery & Filtering:** Built a browsing system to filter animals by type (Cow, Goat, Sheep) and sort by price and weight using MongoDB queries, reducing time-to-decision and improving purchase confidence for buyers.
- **OAuth Across Environments:** Resolved a Google OAuth callback mismatch between local and Vercel production by configuring BetterAuth with environment-specific redirect URIs, eliminating auth failures that blocked users from completing bookings.
- **Polished UX with Motion & Feedback:** Integrated a Lottie loading screen, React Spring card animations, and Animate.css toast notifications—delivering a smooth, app-like feel on a fully responsive, Vercel-deployed interface.

EDUCATION

Bachelor of Computer Science 2024 – Expected 2028

Northeast Petroleum University, Daqing, China

EXPERIENCE

Aspire Leadership Program 2024

- Participated in structured leadership development activities with cross-functional teams
- Strengthened teamwork, communication, and problem-solving skills in collaborative settings

LANGUAGES

Bangla (Native) **English** (Fluent) **Chinese** (Basic — HSK 2)
